1. INSTALLATION

NOTE: This Ipclient software matches with all this supplier's MPJEG&H.264 IP cameras.
Before installation, pls kindly turn off the firewall and Antivirus software of the computer connected, so that this software can be installed completely and successfully. Pls don't worried, it's safe and won't bring any problem to your computer.
After installation, If there is clue for restarting the computer, please just do it, then you can use the IPClient software.

2. SOFTWARE OPERATION

2.1.Login

Double click the IpcamClient icon, you will see the login interface as below, choose English language:

Enter the username and password. The default username is **admin**, default password is **admin**; then click **OK** to login:

After login, will pop-up the software interface as below:

2.2. For Multi-windows

: Click it will pop-up the multi-windows options, can be from 1 to 64

1 Window
4 Windows
9 Windows
16 Windows
36 Windows
64 Windows

windows.

: Click it to turn to the full screen, double click the screen or press the **Esc** on the keyboard to back to normal.

: Click it to page up/down.

2.3. System Settings

: **System Setting:** Click it will pop-up the system setting options as

Basic Settings
User Settings
Device List
Search File

2.3.1 Basic Settings:

Click it to login the basic settings interface as below:

2.3.1.1 Record:

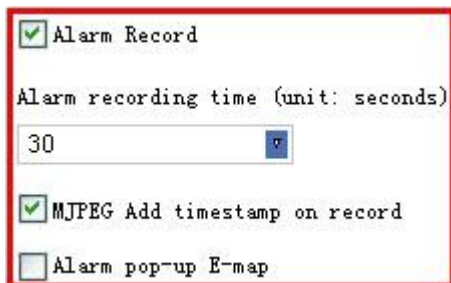

1. **Add/Delete:** Click it to set/delete the path for record files saved.
2. **Record file length:** Click it to set the length for every record file, could be 30/60/120/180/300 minutes.
3. **MJPEG add timestamp on record:** Select it to enable the function.
4. **MJPEG compressed into MPEG-4 format:** Select it to enable the function, will save the space for recording files.
5. **Automatically covered once recording space is full:** Select it, once the hardisk is full, it will re-cover automatically.

2.3.1.2 Capture:

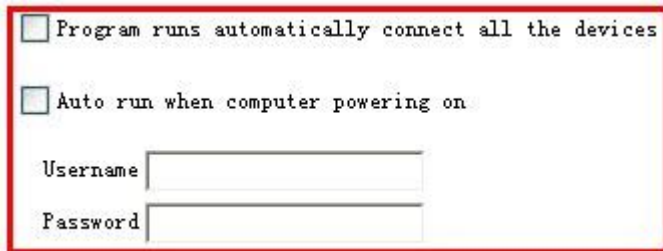

1. **Add/Delete:** Click it to set/delete the path for snapshot files saved.
2. **Open the folder when capture image:** Select it, will pop-up the folder when capture image saved.

2.3.1.3 Alarm:

1. **Alarm Record:** Select it to active record function once alarmed.
2. **Alarm recording time:** Set the duration for every alarm, could be 30/60/120/180/300 seconds.
